least a medial portion of the middle finger and a portion of a side of the middle finger between an index finger and the middle finger, the palmer portion further comprising a base layer positioned for contact with a palm of a human hand; a topper layer fixedly engaged over the base layer; a single resilient pad engaged between the base layer and the topper layer, the resilient pad outlined by a first stitching creating an elongated oval shape, the topper layer extending past the resilient pad in the direction of the wrist portion and covering a substantial portion of the palm; wherein the extended portion of the topper layer is fixedly secured directly to the base layer of the glove, and the resilient pad is bifurcated by an approximately linear stitching extending across the palmer portion in correspondence to the distal transverse crease in the palm of the human hand to form two ergonomically convex structures that are substantially similar in size and extend laterally across the metacarpals.

16. (new)

The apparatus of claim 15, further comprising a thumb portion; the thumb portion providing a second reinforcing layer fixedly positioned over at least a palmer side of the thumb portion and extends to a side portion of the thumb finger between the thumb and index finger.
